

SOMATOM go.Platform
Stand out in
advanced
CT procedures

➤ siemens-healthineers.us/somatom-go-platform

Do you find these healthcare trends challenging?

Concerned that patients may leave your institution dissatisfied?

Patient satisfaction

“Improving patient satisfaction with their CT experience” is ranked top priority by CT department responsables.¹

Wondering if you are operating your CT scanner at its full potential?

Scanner operation

“The use of protocols and radiation dose varies greatly,” studies² that analyzed millions of CT examinations worldwide showed. And this is not because of the equipment characteristics, but mainly because of the choices of the individual users.

Curious about the use of AI in your CT system? But also skeptical about it?

Artificial Intelligence

“Already, 77% of the devices anyone of us uses feature one form of AI or another.”³

- > Why Siemens Healthineers?

In a market characterized by intense competition, more selective patients, and reimbursement cuts, healthcare providers must find ways to leverage technological advancements while securing income and referrals.

We want to help you succeed day after day. This is why we developed the SOMATOM® go. platform. Our SOMATOM go. scanners feature a unique tablet based mobile workflow, user guidance with our GO technologies, and exclusive innovations such as Tin Filter low dose-technology.

➤ Click each circle to learn more

Focus on your patients

Today's healthcare market is highly competitive. And with patients turning into critical consumers, it's becoming increasingly important to optimize their diagnostic experience in order to stay successful. Healthcare providers have to thrive in a highly competitive market that is driven by value-based reimbursement. To keep the business growing, you need to improve patient experience and expand your clinical portfolio. Improve patient experience and put patients into the focus of care delivery throughout the CT imaging workflow with SOMATOM® go.Platform. We upgraded our successful scanner with our unique Mobile Workflow and smart tools that help you stay with your patients longer and provide closer care.

SOMATOM go.Platform also includes intuitive, AI-powered scan automation and new clinical features – making procedures like preventative care e.g. lung cancer screening available for daily practice.

Of course, the CT scanner comes with the image quality and dose reduction technologies you expect from us, as well as built-in solutions for lower lifecycle costs.

The SOMATOM go. platform originates from the medical community. It was co-created with 500 of our customers, from CEOs to the wonderful people who care for patients every single day. This platform turns user requirements into solutions and offers you a scanner to meet your needs. Cover the full clinical spectrum. Easily. And adapt your workflow to every indication.

SOMATOM go.Top delivers advanced imaging capabilities for full line hospital work such as trauma and advanced cardiac.

SOMATOM go.Top Cardiovascular Edition meets all your cardiac imaging needs in the outpatient or office based setting.

SOMATOM go.All allows you to take on advanced CT procedures in the busiest imaging departments.

SOMATOM go.Up allows you to enhance your routine practice and enter the field of preventative imaging e.g. Lung Cancer Screening.

SOMATOM go.Now is the ideal system for specialized imaging centers and basic imaging requirements.

Why this CT scanner is your CT scanner

The SOMATOM go. platform originates from the medical community. As a member of this platform, SOMATOM go.Platform was co-created with 500 of our customers, from CEOs to the wonderful people who care for patients every single day. After some successful years, we decided to turn more user requirements into solutions. This wouldn't have been possible without you. Thank you.

Improve patient experience
with mobile devices that let you
focus on your patients

Increase standardization
with GO technologies powered
by Artificial Intelligence

Transform care delivery
with preset patient pathways
for various clinical applications

Enhance efficiency
with AI-based patient positioning
and remote scanning assistance for
technologists

**Optimize the diagnostic
experience**
with, for example, the ambient
mood lighting and low noise

“Which shoulder is to be reconstructed?”

“Does the patient have metal implants?”

“Single or spectral imaging?”

myExam Companion takes you to the predefined scan strategy

Answer a handful of simple questions. And myExam Companion guides you quickly and safely through any procedure.

[↗ Visit myExam Companion website](#)

[↗ Click each system name to learn more](#)

An obese patient.
Suffering from claustrophobia.
A worklist of 22 further exams ahead.

**Stay cool. Stay mobile. Stay with your patient.
With our Mobile Workflow.**

Mobile devices, connected data. Giving you more time for those who need you. Read the whole story on pages 8-11.

Improve patient experience with trendsetting workflows

Patient expectations are increasing and patients are becoming more vocal about their healthcare experience. With the Mobile Workflow on the SOMATOM go. platform, your patients feel personally attended to and experience their treatment more positively.

Workstation – use it where you need it

Thanks to tablet-based operation and gantry-integrated computers, a SOMATOM go. scanner gives you complete flexibility over where you position the workstation. Depending on your needs and infrastructure, you can choose where to set it up.

[➤ Click to learn more](#)

Less time in the control room, more with the patient

A standard workflow—with most of the operator's time spent in the **control room**.

The unique Mobile Workflow with SOMATOM go.Platform—a huge shift toward spending most of the time **with the patient**.⁴

Average time spent on location:

Higher efficiency, higher patient comfort, fewer motion artifacts

Thanks to mobile devices and connected data, you can stay close to the patients who need attention most, like small children, and put them at ease. This may help with reducing patient motion and thereby improving image quality.

Empirical results show that staying close to patients can substantially improve their examination experience.

The Mobile Workflow – figures tell the story

20%

faster patient preparation⁴

62%

increase in positive patient experience⁴

90%

more time spent in the same room with the patient, plus higher freedom of movement for radiologists⁴

39%

increase in patients who feel more satisfied from the medical service they receive⁴

Figures compared to conventional workflow.

A new workplace design – a new working experience

Focus on your patients and improve not only their experience and satisfaction, but also yours.

With the tablet, you can ...

- have total freedom over how you work
- stay close to the patient at all times:
 - preparing all scans right at the gantry
 - previewing images directly at the tablet
- use up to three tablets simultaneously
- dock and charge the tablets at the docking station

The remote control helps you to ...

- simplify patient positioning
- start the scan remotely, complementing the tablet for a true Mobile Workflow

The FAST 3D Camera* opens up new ways to ...

- capture the patient's shape, positioning, and height in 3D
- even recognize body contour (e.g., when patients are wearing thick clothes)
- use this data for accurate and reproducible patient positioning

The gantry-mounted injector arm lets you ...

- position the injector where you need it, when you need it
- flexibly move it to other positions
- work in a neat and patient-centered environment without a blocking injector cart

The gantry-integrated camera makes it easy to ...

- keep an eye on the patient
- calm down patients thanks to ambient mood lighting
- visualize the scan duration using the integrated digital countdown for breath-hold

The gentle voice and sound design lets you ...

- increase patient comfort and improve your working environment with a low noise level even during peak operation
- give patients gentle voice guidance of breathing instructions

*Available only on the SOMATOM go.Up, SOMATOM go.All and SOMATOM go.Top

Smart helpers that let you go for any pathway

SOMATOM go.Platform features smart helpers to standardize and simplify your departmental processes—from patient setup to image distribution, archiving, and reading. Prevent repetitions. Skip routines. And dedicate your energy to patients and results.

myExam Companion

myExam Companion launches the era of intelligent imaging. Using the new possibilities of digitalization, it turns data into built-in expertise. This helps users efficiently achieve reproducible results – by unlocking your modality’s full potential.

myExam Companion guides users through any procedure, so they can interact easily and naturally with both patient and technology. No matter the user, patient, or throughput, it helps generate consistent, comprehensive results.

AI-Rad Companion

AI-Rad Companion is our family of vendor-neutral, multi-organ augmented reading solutions. Taking over basic, repetitive tasks, they support experienced staff in working at the top of their license. AI-Rad Companion reading solutions automatically prepare the clinical input: They identify and quantify relevant anatomies and abnormalities and put findings into a diagnostic context.

Scan&GO

Anticipate potential breathing artifacts: Train breath-hold with your patients using Scan&GO. It also lets you control scans remotely and check images quickly, right after the scan, on your tablet – so you can spend more time with your patients. What’s more: You can enhance your degree of freedom by using up to three tablets in perfect sync.

Check&GO

Based on big data, the intelligent algorithms from Check&GO identify potential errors with organ coverage or contrast media volume and distribution plus the presence of wearable metal objects (e.g., belts, necklaces). This helps you take immediate action or correction.

Recon&GO

Recon&GO delivers fast and standardized results irrespective of the operator. With AI recognizing patient landmarks and anatomies, it automates postprocessing tasks to reduce repetitive workflow steps. Even spectral imaging becomes routine, since Recon&GO automatically creates zero-click results. It offers a fully automated recon process for any organ – including all vascular views for contrast-enhanced CT reporting.

CT View&GO

CT View&GO enables smooth reading in one workflow right at the scanner. Advanced CAD algorithms and applications boost diagnostic confidence. Communication within your department is easy, since CT View&GO automatically films and distributes images and results according to your settings.

Transform care delivery with your new patient pathways

With every patient and clinical indication being different, fast and easy adaptation is key to success. Confidently offer advanced CT procedures and optimally adapt to each type of patient: SOMATOM go.Top and SOMATOM go.Top Cardiovascular Edition offers clear patient pathways that help you turn challenging clinical fields into daily routine.

On this and the following pages, discover the example of three clinical pathways plus the enabling technologies, most of which were adopted from our high-end scanners.

myExam Companion guides you through your cardiac examination

Still think that this outcome is difficult for you to get?

The new patient pathway leverages the full potential of technologies automatically and takes you there.

Erlangen, Germany

Cardiac CT made easy with SOMATOM go.Top and SOMATOM go.Top Cardiovascular Edition: myExam Compass, breathing training, and other smart helpers let you focus on what is most important, your patient. Minimize motion artifacts and optimize image quality by relying on the fast temporal resolution and the highest tube current of its class. And let automated postprocessing do the rest, providing you with comprehensive results for your cardiac assessment.

For more information on the technologies, see pages 20-22.

What exam do you GO for today?

myExam Companion guides you through your oncological assessment with spectral imaging

AI Artificial Intelligence inside
 *Automatic Landmarking and Parsing of Human Anatomy

FAST 3D Camera is available on the SOMATOM go.Top, SOMATOM go.All, SOMATOM go.Up

TwinBeam Dual Energy is only available on the SOMATOM go.Top

Spectral imaging revisited: A thorough solution for your oncological assessment with various postprocessing capabilities available directly at the acquisition workplace.

myExam Companion guides you through your spectral imaging of calculi

AI Artificial Intelligence inside
 *Automatic Landmarking and Parsing of Human Anatomy

FAST 3D Camera is only available on SOMATOM go.Up, go.All and go.Top

Spectral imaging revisited: Experience the improved spectral separation with the Tin Filter and benefit from various postprocessing capabilities for your color-coded images.

myExam Companion guides you through your thorax examination

With SOMATOM go.Platform you can achieve ultra-low-dose thoracic examinations powered by the Tin Filter. The AI-Rad Companion complements the workflow with your augmented reading aide.

For more information on the technologies, see pages 20-22.

FAST 3D Camera is available on the SOMATOM go.Top, SOMATOM go.All, SOMATOM go.Up

The secrets of low dose and high image quality

SOMATOM go.Platform allows you to serve the full clinical spectrum. Equipped with premium technologies, it lets you confidently integrate specialized CT procedures into daily routine.

Stellar detector

Reduces image noise in every scan, while the advanced iterative reconstruction SAFIRE⁵ delivers image quality at very low dose. Due to an increased channel density and a new geometry, the detector provides homogenous high image quality, even in complex areas.

The Stellar detector demonstrates clinical value with improved image quality, reduced image noise and fewer artifacts when compared to previous detector generations.

High Power

High Power allows you to scan at the highest tube current in their class: up to 400mA at 80kV on SOMATOM go.Now & go.Up thanks to the Chronon X-Tube. Up to 825mA even at 70kV on SOMATOM go.All & go.Top with Athlon Tube.

Benefits

- Low kV with high currents enhances iodine contrast, which is especially useful for very small vessels
- Utilize very low tube currents for ultra low-dose scanning and lung cancer screening
- Maximize the usage of the Tin Filter for soft tissue imaging
- Profit from increased reliability with its compact design and highly efficient tube cooling

Chronon X-Tube

Athlon™ X-ray tube

10 kV Steps & CARE kV

Furthermore on SOMATOM go.All & go.Top the tube voltage is automatically tailored to each patient and clinical indication by CARE kV. Voltage levels can be adjusted at intervals of 10 kV for less dose and high contrast resolution and are aligned with respective tube currents. This keeps dose low, while image quality stays high.

Tin Filter

Achieves ultra-low dose levels by cutting out lower energies and optimizes image quality at the interface between soft tissue and air. This unique technology from Siemens Healthineers has direct benefits in lung and colon imaging, for example. Clinical experience also shows that the unique Tin Filter technology reduces beam-hardening artifacts and improves image quality in bony structures.

iMAR

Reduces metal artifacts for better image quality without increase in dose. The high-end algorithm can handle a wide variety of metal implants for smoother, more efficient workflows. iMAR^{®)} – iterative metal artifact reduction – helps you handle metal implants such as dental fillings, pacemakers, and extremity implants.

SAFIRE

SAFIRE (sinogram affirmed iterative reconstruction) is an iterative reconstruction algorithm that delivers image quality at low dose.⁵⁾ It is fast, simple to use, and can be easily implemented into daily routine.

The secrets of low dose and high image quality

Spectral imaging

Launches the next generation of spectral imaging in clinical routine: The holistic solution with two Dual Energy modes prepares you for virtually all clinical questions. TwinBeam Dual Energy acquires low- and high-kV data sets in a single scan, providing an unparalleled wealth of diagnostic information. TwinSpiral Dual Energy provides both morphological and functional information in non-contrast scans by a new workflow concept of two scans integrated into a single acquisition. With an improved spectral separation due to the Tin Filter, better dose distribution, and the well-known GO technologies, this makes a holistic solution – routine-ready with extra advanced automation.

Fast 3D Camera

Expanding precision medicine with automated patient positioning

The industry's first and only automated patient positioning system leveraging artificial intelligence. Activated by gantry-mounted touch screens, the FAST 3D Camera uses infrared technology and artificial intelligence to recognize anatomical landmarks. The FAST Integrated Workflow helps our customers reduce variability and errors, increase efficiency, and personalize patient dose. Available on SOMATOM go.Up, go.All and go.Top

*Available on SOMATOM go.Up, go.All and go.Top.

Rounding out your daily experience

Discover more smart tools that help facilitate your daily routine.

Guide&GO

The first tablet-based solution for CT-guided interventions. Control and monitor the entire procedure via the tablet and remote control:

- Enjoy a streamlined workflow with a fast, image-based definition of the target position and a flexible patient table move concept.
- Perform accurate measurements and plan a secure needle path with 2D-Needle guidance, using intuitive image manipulation functions.
- Safeguard and monitor needle placement using FAST i-Sequence with fast repetition of multiple low-dose control scans.

syngo.via View&GO

syngo.via View&GO is an intuitive multimodality reading and viewing solution that provides smart access to speed up your daily routine. The flexible stand-alone software solution is equipped with a wide range of clinical tools. You can start right away to read and evaluate your studies with ease – located in one familiar and intuitive environment. *syngo.via* View&GO drives performance and simplicity by bringing the same look and feel for the scanner and reading environment.

Easily download and install *syngo.via* View&GO on various types of hardware – for example, on your computer.

1 Download the software packages from the internet.

2 Receive your user information input and registration via email and the activation key from your local Siemens Healthineers Sales Representative.

3 Validate your registration information online.

4 Install the software packages on your computer.

Improve profitability with a smart investment

With reimbursements and budgets shrinking, the initial investment and the Total Cost of Ownership (TCO) become key factors of your CT system. That's why SOMATOM go. Platform has been designed for clever savings, reduced lifecycle costs, and easy fleet management.

Initial investment: Outsmarting installation costs

SOMATOM go.Platform comes with low installation costs. Thanks to gantry-integrated computers and the flexible room concept, you no longer need to invest in a separate control room. Whatever concept you choose, your operators are fully protected while the X-ray is on:

Niche setup in the examination room

Workstation outside the room, e.g., in the corridor

Traditional two-room setup with separate control room

Reducing operational costs

SOMATOM go.Platform is designed with an eye to reducing operational costs. A clear focus was put on minimizing standby consumption, which represents 90% of the total electrical consumption costs.

Electrical consumption comparison⁹⁾

A boost for your business

SOMATOM go.Platform has everything you need to give your CT business a new push forward. You can:

- Unlock more reimbursement opportunities thanks to intuitive workflows
- Increase patient throughput and thus revenue due to faster positioning, simplified workflows, and the ability to scan more kinds of patients
- Decrease installation costs thanks to the flexible room concept
- Cut running costs with ultra-low energy consumption during scanning and standby

.... Without SOMATOM go.Top
 — With SOMATOM go.Top

Fleet management: Enhance standardization and drive efficiency

syngo Virtual Cockpit is designed to assist scan procedures from a distance. Enabled by *syngo* Expert-i, expert colleagues receive access to the scanner and can support less experienced technologists – for reproducible results across your entire CT system fleet.

And with our cloud-based performance management solution *teampay*, you get a transparent overview of your system data. Easily identify areas for improvement and monitor your Siemens Healthineers fleet's performance.

Enable remote scanning assistance with *syngo* Virtual Cockpit.

Optimize scanner performance with *teampay*.

Your product services in the digital era

SOMATOM go.Platform equipment service is based on Siemens Healthineers matchless service infrastructure around the world:

>207 billion
data points for >5,000
patterns in neural network

>40,000
updates & upgrades
per year

>50%
remote
solving rate

>27,000
active systems and
>2,000 service engineers

Service Plans with AdvanceNow: The service plan in the digital era

Siemens Healthineers service agreements are designed for maximized efficiency and excellent clinical outcome in the digital era. They comprise a wealth of innovative and intelligent services that keep you cutting-edge, connected, and competitive. At the core of every service contract is Siemens Healthineers' continuous update and upgrade service, AdvanceNow. This key component provides frequent software updates and upgrades – including cybersecurity patches – and replacement of computer hardware as required, enabling you to benefit from advancements in intelligent imaging. Keep your imaging equipment up-to-date, constantly and easily.

Based on this exceptional infrastructure and connected through our Smart Remote Services, SOMATOM go.Platform offers unique services to continuously ensure system availability:

Condition-based maintenance

Reduced maintenance downtime through system load-specific maintenance intervals. Key components and parameters of the system are constantly monitored with regards to maintenance tasks.

Remote technical support

Improved equipment uptime through fast access to technical expertise and usage of advanced tools. Technical experts provide you with fast and efficient support to restore your operations and increase the availability of your equipment remotely.

PEPconnections

The competency-based online education solution that offers instant access to education, performance support, and expertise. Personalize the education experience of individual employees with customizable learning plans. Assign, create, track, and manage the education of entire groups.

Why Siemens Healthineers?

At Siemens Healthineers, our purpose is to enable healthcare providers to increase value by empowering them on their journey towards expanding precision medicine, transforming care delivery, and improving patient experience, all enabled by digitalizing healthcare.

An estimated 5 million patients globally everyday benefit from our innovative technologies and services in the areas of diagnostic and therapeutic imaging, laboratory

diagnostics and molecular medicine, as well as digital health and enterprise services.

We are a leading medical technology company with over 120 years of experience and 18,500 patents globally. With more than 50,000 dedicated colleagues in more than 75 countries, we will continue to innovate and shape the future of healthcare.

At Siemens Healthineers, our purpose is to enable healthcare providers to increase value by empowering them on their journey toward expanding precision medicine, transforming care delivery, and improving patient experience, all enabled by digitalizing healthcare.

An estimated 5 million patients globally benefit every day from our innovative technologies and services in the areas of diagnostic and therapeutic imaging, laboratory diagnostics, and molecular medicine, as well as digital health and enterprise services.

We're a leading medical technology company with over 120 years of experience and 18,500 patents globally. With about 50,000 dedicated colleagues in over 70 countries, we'll continue to innovate and shape the future of healthcare.

The outcomes and statements provided by customers of Siemens Healthineers are unique to each customer's setting. Since there is no "typical" hospital and many variables exist (e.g., hospital size, case mix, and level of service/technology adoption), there can be no guarantee that others will achieve the same results.

⁸iMAR is designed to yield images with a reduced level of metal artifacts compared to conventional reconstruction if the underlying CT data is distorted by metal being present in the scanned object. The exact amount of metal artifact reduction and the corresponding improvement in image quality achievable depends on a number of factors, including composition and size of the metal part within the object, the patient size, anatomical location, and clinical practice. It is recommended to perform iMAR reconstruction in addition to conventional reconstruction.

⁹Multi-vendor standardized COCIR energy consumption for total standby/idle mode measurement based on the self regulatory initiative. Conventional technology refers to previous equivalent scanners. Data on file.
